Question 2:

The screenshot shows a REST client interface with a single request tab titled "My first request". The request is a GET to `http://localhost:9876/stocks/NVDA?minutes=30&agg`. The status is **200 OK** with a response time of 166 ms and a body size of 41 B. The "Params" tab is active, showing a URL preview of `http://localhost:9876/stocks/NVDA?minutes=30&aggregation=average`. The "Query Parameters" section is empty. The "Preview" tab on the right shows a JSON response:

```
1 {
2   "averageStockPrice": 0,
3   "priceHistory": []
4 }
```

The screenshot shows the same REST client interface with a second request tab. The request is a GET to `http://localhost:9876/stockcorrelation?minutes=30&ticker=NVDA&ticker=PYPL`. The status is **200 OK** with a response time of 216 ms and a body size of 116 B. The "Params" tab is active, showing a URL preview of `http://localhost:9876/stockcorrelation?minutes=30&ticker=NVDA&ticker=PYPL`. The "Query Parameters" section is empty. The "Preview" tab on the right shows a JSON response:

```
1 {
2   "correlation": 0,
3   "stocks": {
4     "NVDA": {
5       "averagePrice": 0,
6       "priceHistory": []
7     },
8     "PYPL": {
9       "averagePrice": 0,
10      "priceHistory": []
11     }
12   }
13 }
```

At the bottom, a message states: "Path parameters are url path segments that start with a colon ':' e.g. 'id'" with a close button.
